- AWS, Linux server
- Photoshop
- UI/UX

Languages

Finnish (native)

English (excellent)

Hobbies

On my free time I de-stress by playing difficult video games that require focus and perseverance. I also enjoy cooking and exercising.

Mikko Haaparanta

Senior Full Stack Web Developer

I am a passionate web developer from Nokia with over 15 years of work experience, mainly programming, but also including server administration, leading projects and customer service. I am a positive and calm problem solver and I get along well with different people. I am honest, hardworking and conscious in my work. I can perceive big pictures while also being able to tinker with nitty-gritty details.

Experience

2024 - ElemIT Avoin Yhtiö Entrepreneur

I work as a key IT developer in my company. As an entrepreneur I have developed my programming skills independently to accommodate the requirements of our products. Our main product is my self developed CMS system that we use to offer high quality websites for our clients. The CMS system is running in Amazon EC2 environment that I maintain and have built and deployed from the ground up. The CMS system is developed to be highly cost-efficient and lightweight by maximizing the usage of native features at the backend and frontend. Development is done mainly with PHP 8.3, MariaDB, Vue.js and Alpine.js.

2015 - Digipalvelutoimisto Tremedia Ky Senior Full Stack Web Developer

At Tremedia I have been a part in a large scale of different projects in web development, including Tremedia's own products: ecommerce system, CMS system, feedback and reclamation system, appointment reservation system, intranet, etc. As well as multiple different custom web site projects. I have worked in direct contact with various clients, worked as project lead, set up and maintained cloud servers, defining accessibility practices and taken part in transitioning our client to Microsoft D365 ERP system.

2006 - 2013 Tutkimustie Oy Senior Full Stack Web Developer

At Tutkimustie I independently developed and maintained key services and products, for example the transcription and translation service which is central to the company's business operation. I also developed entirely new products, for example the service for research and participant recruitment, which allowed the company to transition to a whole new markets.
